Sunnaas Rehabilitation Hospital

A way forward

Sunnaas Hospital is a way forward for patients and families navigating recovery after serious injuries and illnesses. We offer new opportunities and multiple paths to help patients shape their futures based on their own conditions, desires, and values. As Norway's only hospital specialising in rehabilitation, Sunnaas Rehabilitation Hospital provides comprehensive services for those needing specialised treatment after injuries, accidents, or illnesses affecting their functional ability. Our cross-functional approach secures a holistic rehab process.

We treat patients with spinal cord injuries, multiple traumas, acquired brain injuries (including cognitive challenges), pain conditions, severe burns, neurological diseases, and rare congenital diagnoses.

Research and innovation

30 PhD and postdoc students

20 Innovation projects

10 Academic positions at 4 universities

Sunnaas Rehabilitation Hospital is a research and innovation hub with a strong national and international network. We offer academic positions, internships, and thesis opportunities in health sciences, medicine, psychology, and technology. Users actively participate in our clinical studies, keeping us at the forefront of rehabilitation.

The Sunnaas Rehabilitation Cluster (SRC) turns this activity into a vibrant collaboration platform. Partners from hospitals, academia, and industry can access first-rate infrastructure to innovate, implement, and evaluate cutting-edge rehabilitation programs.
